

How to use your Buttolo Buck Call

You take the rubberball in your hand, so that your thumb rests on top of the Buck Call (illustration A.). A gentle push is enough to bring out a **life-like “fiep” tone** of a buck (illustration B.). To bring out an **alarm-call**, give the buck call a steady push right to the bottom of the ball (illustration C.).

Do not press the ball unnecessarily hard to the bottom. This could harm sensitive parts of the pneumatic “voice” system.

The ball at the front has two small holes in the sides and one on top to modulate the tone.

A tip is to put the buck call in your front pocket when you make the “fiep” tone so as to muffle the sound a bit. This makes the tone low and longing. Bucks will still hear the call from a considerable distance.

Fiep-tone

You push the Buck Call from position A. to position B. with a gentle push which brings out a tone that sounds something like *fie*.

One fiep - 3 seconds pause – one fiep – a 10 second pause – one fiep – 3 seconds pause – one fiep – 3 seconds pause – one fiep - a 10 second pause – etc.

Fie 3/sec, fie --- 10/sec --- fie 3/sec, fie 3/sec, fie --- 10/sec --- fie 3/sec, fie --- 10/sec --- fie 3/sec, fie 3/sec, fie --- 10/sec --- fie 3/sec, fie --- 10/sec --- etc. etc

That is 2 fieps, pause, then 3 fieps, pause, then 2 fieps, and then a 2- to 3 minutes break. Then repeat the theme again.

In order to attract bucks within reasonable time, you must enter the area with the utmost care to noise.

Alarm-call

You push the Buck Call from position A. to position C. with one steady push which brings out a tone that sounds something like *pia*.

You start out with one pia, a short pause of about 2 seconds, then one more pia – 3 seconds pause – one pia – 3 seconds pause – one pia – 5 seconds – one pia – 3 seconds – one pia - 5 seconds – one pia - 15 seconds – one pia -----2 minutes ----- then the same thing once again.

The three last tones can be made while shaking the hand.

Do not exaggerate the calling. One or two sequences and then a long break (10 – 5 minutes) for watching and listening.

In windy weather the Buck Call loses efficiency.

Store in a place no warmer than 15°C. One could place the Buck Call in a small cardboard box to keep it dry and free from dust. With these precautions you will enjoy many years good hunting experiences together with your Buttolo Buck Call.
